

# UPGRADE YOUR SECURITY SYSTEM GET READY FOR NBN

Existing security systems connected to the phone line will require upgrading. By adding a wireless communication module, your home or business will be secured using a reliable, 24/7 supervised link, that delivers increased functionality for stress-free protection of your premises.

The Australian National Broadband Network (NBN) is advancing its roll-out across the country providing homes and businesses with fast, reliable internet access.

If your security system is using the phone line for alarm monitoring, migrating to the NBN will require an additional communications module installed, ensuring your premises remain secured and monitored.

## NEW UPGRADE FEATURES

### Smart phone control

Using our app, you can control your alarm system remotely, check your alarm status instantly, and receive notifications and event logs for your convenience.

- > No need to worry if you forgot to arm your security system when you left.
- > Easily add or delete app users for friends, family, or cleaners.
- > Manage multiple sites and security systems in one app.
- > Open your garage door, front door, or gates remotely.

### Vandal proof

Monitored security systems can be disabled by cutting the phone line using wire cutters. Wireless communicators can't.

### Got a power outage?

Your premises remain secured and connected 24/7.

### Network Failover

Our Dual SIM service automatically switches between Telstra & Optus networks, adding additional redundancy to your alarm monitoring service.

### 24/7 supervision

Wireless communicators monitor the critical link to your Monitoring Centre 24/7; in the rare event that connectivity is lost, the Monitoring Centre is automatically alerted.

## CHOOSE THE MARKET LEADER

When it comes to protecting your property, you want the most security with as little stress as possible.

Upgrading to a Permaconn wireless security solution equips you and your home with market leading, mission-critical technology, designed to take advantage of the latest in network connectivity.

Compatible and easily integrated with most existing alarm systems, a wireless Permaconn system is a simple upgrade that makes protecting your home or business stress free.
